

Curriki Grants Application Information

Bring an AI tool to your school - AT NO COST !

What we do for K-12 schools

Curriki Grants helps K–12 schools access powerful, AI-driven EdTech tools that improve learning outcomes—but are often out of financial reach.

We award grants in order to support schools who are ready to adopt these tools and accelerate student progress through personalized, data-informed instruction.

Since launching our grants in October 2025, we have awarded grants to nearly 40 schools. Curriki also supports AI in Education with [FREE Courses](#) for Teachers, and [comprehensive reviews](#) of AI Software.

Who is eligible ?

- Curriki is currently awarding grants to US based schools that are:
 - **Public schools**
 - **Charter schools**
 - **Non-profit private schools**
- We are actively exploring logistics to support **for-profit schools** in future grant cycles, but they are not eligible at this time.

What makes a strong grant application ?

While full criteria will be shared once applications open, strong applicants typically:

- Request an AI tool that is **already approved** by Curriki (non-approved tools require us to contact the vendor in advance for review, but aren't means for rejecting the grant.)
- Serve a student population with **demonstrated financial need** or have limited financial budget in your school for EdTech tools.
- Represent **small or mid-sized schools** or individual sites in a larger district.
- Are looking to adopt a **student-facing AI tool** that supports learning outcomes in areas like **Math, ELA**, or general academic growth

- Can clearly explain how you'll **implement the tool**, including device compatibility, LMS integration, and staff support.
- Are open to sharing **feedback or impact stories** after the grant.

Which AI tools are available ?

Curriki is currently in the process of reviewing and approving a select group of AI-powered EdTech tools for grant eligibility. By mid 2026, we expect to have an approved list of tools posted on our website. Until then you may apply for a grant of any Educational AI tool so long as the vendor will participate in verification throughout our grant process and we can evaluate the tool to make sure it aligns with our criteria and mission.

Visit grants.curriki.org to view the latest updates.

How the grant process works

1. A school discovers an AI tool and desires to implement it at their school site.
2. They request a quote from the vendor for their school.
3. The school submits the quote with their grant application.
4. If Curriki approves the grant, the school issues a **purchase order (PO)** to the vendor and becomes financially obligated to pay for the tool.
5. The school will be reimbursed by Curriki when they have proof of financial commitment or payment for the tool from the vendor.

Our **first grant cycle** began in **October 2025**. We awarded around 40 grants since. We give between 10-25 grants each quarter depending on the quantity of applicants, tools requested, and available funds.

Frequently Asked Questions

Can for-profit private schools apply?

Not yet. Curriki is currently only supporting **public and nonprofit** educational institutions. We are exploring how to expand this in future cycles.

How large can the grant be?

Grant award amounts vary by need and implementation plan. We will fully cover the cost of most approved tools. Some higher cost products may receive a partial grant. Depending on the sizes of grants we often fund 15-25 schools each cycle as budget allows.

Can I apply on behalf of a multi-school district?

We are prioritizing **individual schools**. Large, multi-school districts are unlikely to be funded in the initial phase, but individual school sites inside the district may apply.

What counts as being technologically ready to implement the tool?

We look for schools that have compatible devices, infrastructure, and staff support to roll

out the tool effectively. This isn't about perfection—just readiness.

What makes a compelling grant application?

Be as thorough as possible on your application. When we review applications we evaluate financial need as well as the likelihood that the tool will be effectively deployed to transform student learning and teacher effectiveness.

Do we need to pay for the tool after the first year's grant?

Not necessarily. You may apply for a **second-year renewal**, but we do not fund tools beyond a second year grant years.
